Universitetet i Oslo

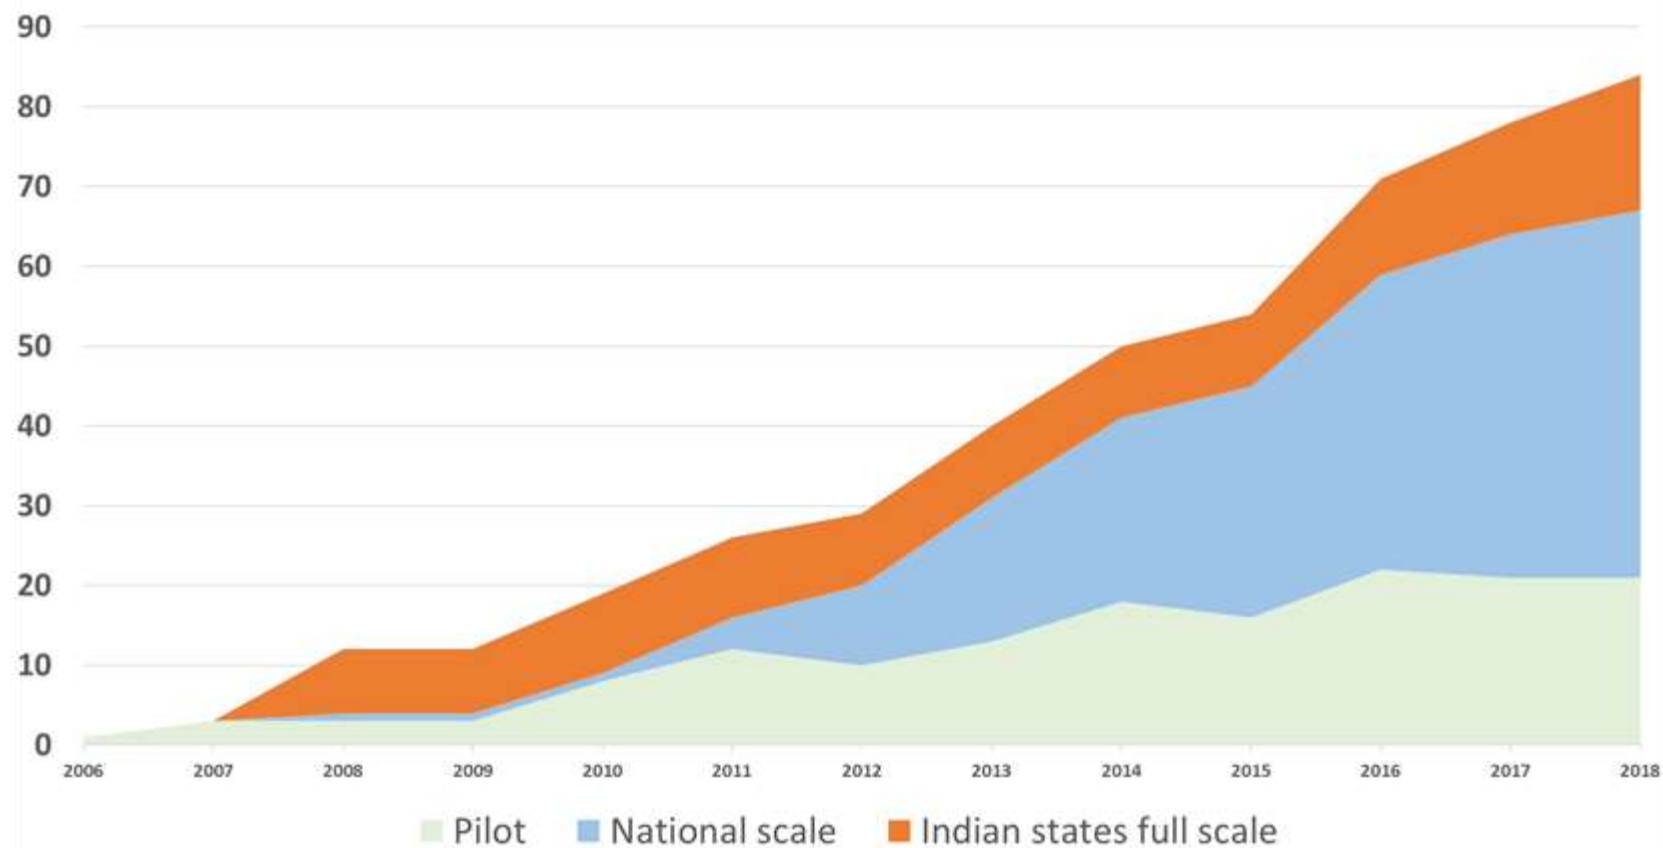

Health Information Systems Program - DHIS 2

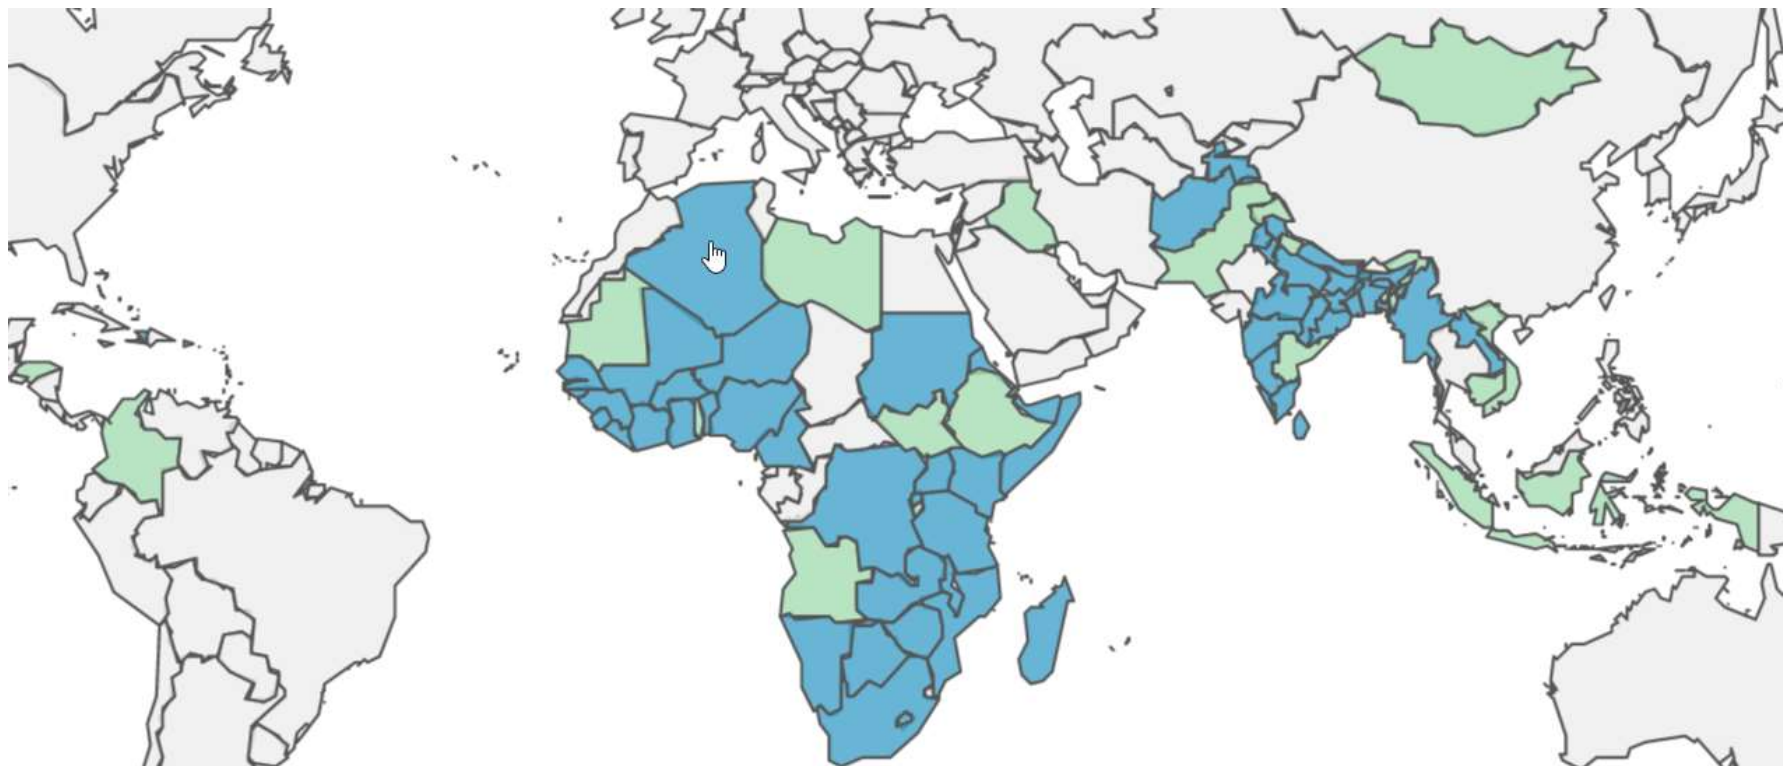

- HISP a global **action research network** initiated in collaboration with University of Western Cape in 1994 funded by Norad.
- DHIS 2 is an open source software for reporting, analysis and dissemination of data for **all** health programs
- Shared and integrated data warehouse for essential health data: **information for action**
- **Aggregate, events, and patient** data
- **Generic and generative platform** - supports a wide range of uses also beyond the health sector
- Financed and endorsed by all Global Health agencies, WHO, Norad, Global Fund, PEPFAR, Unicef, Gates Foundation, GAVI, CDC
- WHO collaborative center
- DHIS2 used in 88 countries in the Global South

Growth in DHIS2 MoH implementations 2006-2018

DHIS2 adoption around the world (MoH implementations) – Jan 2019

**Global «footprint» 2.28
billion people**

**+ 60 NGO's, 58 PEPFAR countries, 60+ PSI
countries, 10 global organizations**

adoption
growing

Action research: Capacity building through innovation

- Strengthening national health information systems
 - Collaborating with Ministries of Health
 - Participatory design (Scandinavian tradition)
- Action Research: Building knowledge on implementing HIS while building systems on the ground through partnerships.
- HISP PhD school at University of Oslo: 50 PhDs graduated, 30 active
- International Masters programs in South Africa, Mozambique, Malawi, Tanzania, Ethiopia, Sri Lanka (400 graduated)
- Regional DHIS 2 Academies, 87 Academies since 2011, 4800 graduated
- Online Academy: Fundamentals, PEPFAR, In country Data Use (Indonesia)

Platform for Global Digital Public Good

A growing DHIS 2 community

- Open source development in a global community
 - HISP Vietnam, HISP Tanzania (UDSM), HISP Uganda, HISP India, HISP US, HISP UiO, HISP South Africa, PSI
- Implementing partners in multiple countries
 - HISP Nigeria, HISP Rwanda, HISP Bangladesh, HISP West and Central Africa, Akros, RTI, CHAI, PATH, PSI and many more
- Collaboration with global agencies and NGOs
 - Norad, WHO, CDC, Gates, Global Fund, Pefar, GAVI, UNICEF, PSI, CHAI, MSF, NRC
- WHO develops standard health apps on DHIS2 with recommended content/configurations
 - Indicators and best practice visualisations for data use at country level
 - Patient-level registries for surveillance

DHIS 2 in a nutshell

- A generic open source software platform supporting a wide range of use cases
- Highly configurable and allows for tailored local systems addressing local needs
- Each MoH implementation of DHIS 2 in a country is fully owned and governed by the country
 - the server, the database, the data is a separate instance of DHIS 2 from other countries' instances
- Each country has a different «system» built on the platform
 - variations in indicators, disaggregations, reports, analytical outputs

University of Oslo is working with WHO to offer standardized material in DHIS2

HISP/ UiO is WHO Collaborating Centre for Innovation and Implementation Research for health information systems strengthening

Global Fund and GAVI are supporting financially the implementation of this material in countries

A set of program-specific meta-data packages (“configuration packages”) have been developed, together with curriculum for how to do program-specific analysis based on this.

HISP/UiO role is to work with WHO, GAVI and Global Fund to support countries who want to use this package.

Global guidance and tools

DHIS2 Country platform: Integrating health programs & data sources

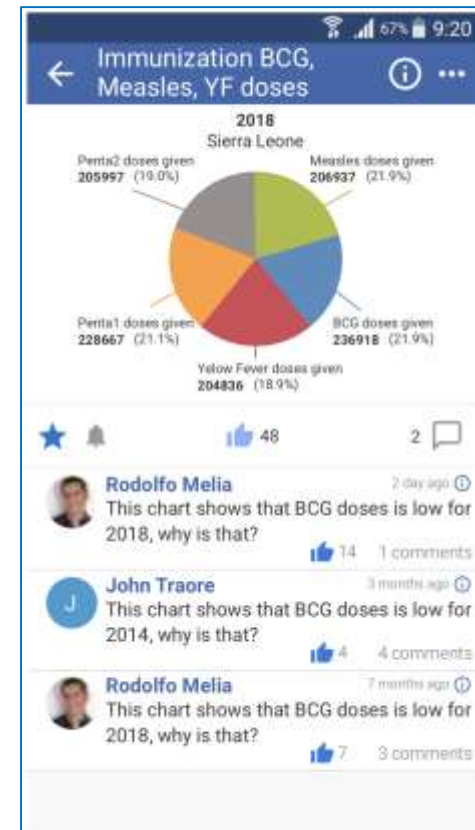

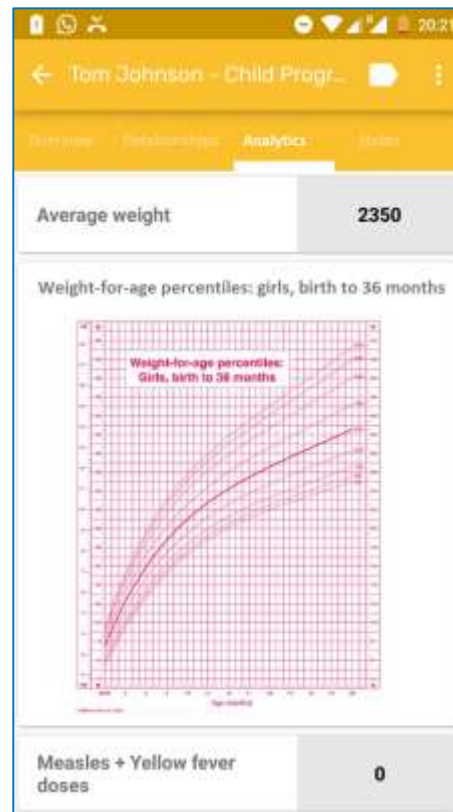

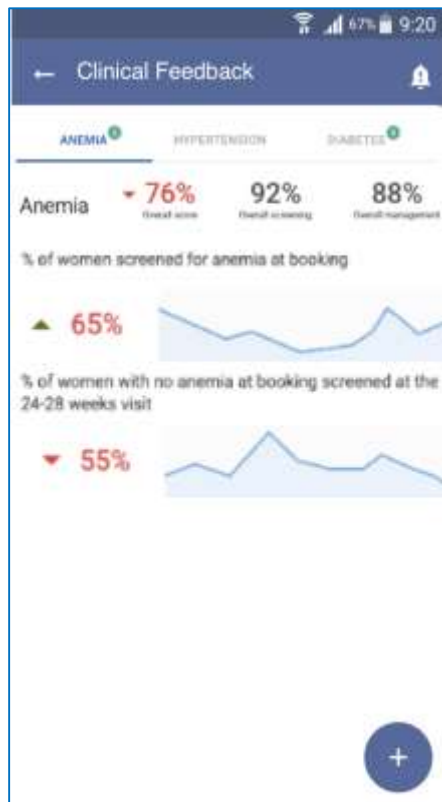

DHIS2 Mobile solutions at Google Play Store

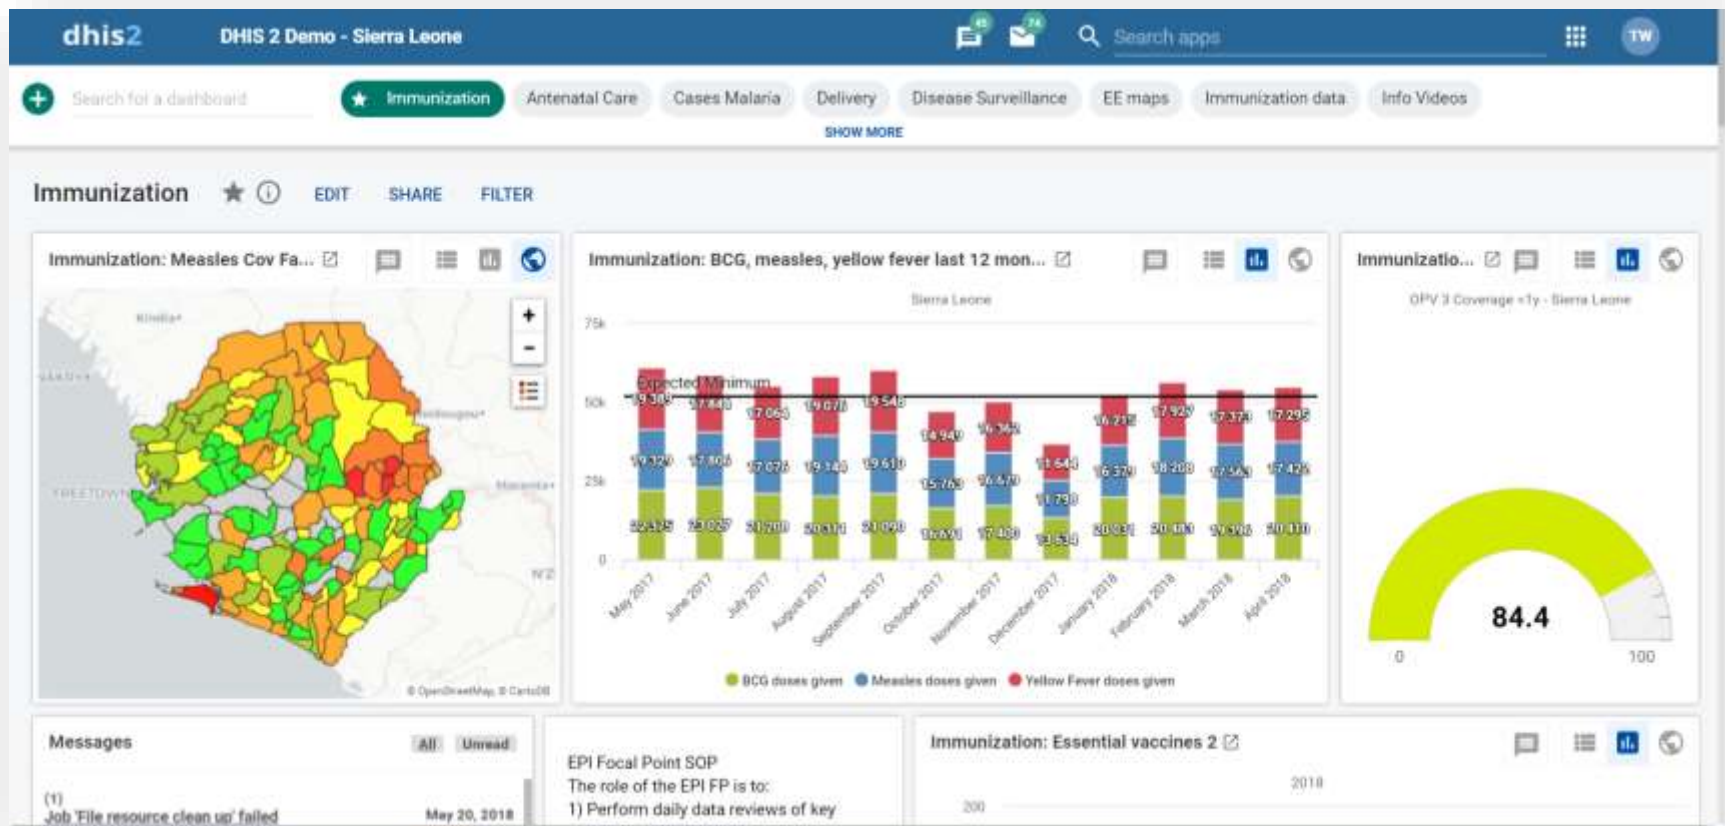

Closing technology gaps: Android

- Vital for offline environments
- Can run on inexpensive mobile devices
- Easy to carry with community health workers
- Social media features

Customizable dashboards for all with real-time data

Training Mobile Dashboard for Head of Facilities in Indonesia

DHIS2 for disease surveillance

- preventing the next big Ebola outbreak

- Ebola outbreak in West Africa in 2014 triggered a need for better routine surveillance systems
- CDC and UiO collaboration (GHSA) on case-based surveillance systems, focused on early detection, **communication** between health clinics and the national laboratories
- Uganda, leading the way, implementing DHIS2 for surveillance at implement national scale

Smart Android phone Case Registration

DHIS2 facility registered user with access to Android Phones, log into the DHIS2 tracker and register a suspected/confirmed case

Training Health Center:

Rumors from Community and Public

SMS case Registration

1. Web, Android, SMS for early notification
2. Links clinic and labs -> confirmed cases
3. Triggers alerts on suspected outbreaks
4. Supports response teams with data analysis

Disease Surveillance Analysis, Reporting and Presentation

DHIS2 as a generic platform: beyond health

- Water and Sanitation
- Nutrition
- Education
- Agriculture

- Reuse of software features
- Reuse of IT capacity in country/region
- Leverage global community

Innovation through partnerships

Biometrics

- Partnering with private companies to create global goods
- Enables health care records even for people without national ID
- Enables anonymous unique ID for vulnerable populations
- Closes the gap between the wealthy and poor when it comes to achieving Universal Health Coverage

Extending the DHIS reach through mobiles

SMS
